Project Name	LearnHub – Online Learning Platform

1. Project Overview

LearnHub is a full-stack Online Learning Platform (OLP) developed using React.js (Vite) for the frontend, Node.js with Express.js for the backend, and MongoDB for database storage. The platform supports role-based access for Students, Teachers, and Admin users, allowing course browsing, enrollment, learning progress tracking, and course management.

2. Technology Stack

Frontend: React.js, Vite, Axios, Bootstrap, Material UI

Backend: Node.js, Express.js

Database: MongoDB, Mongoose

3. Prerequisites

To run the LearnHub project locally, ensure the following are installed on your system:

- Node.js and npm
- MongoDB Community Server
- Vite (via npm create vite@latest)
- Basic knowledge of HTML, CSS, and JavaScript

4. Installation & Setup

Follow these steps to install dependencies and start the project:

Step 1: Navigate into the project directory:

```
cd containment-zone
```

Step 2: Install frontend dependencies:

```
cd frontend
npm install
```

Step 3: Install backend dependencies:

```
cd ../backend
npm install
```

Step 4: Start the development server:

```
npm start
```

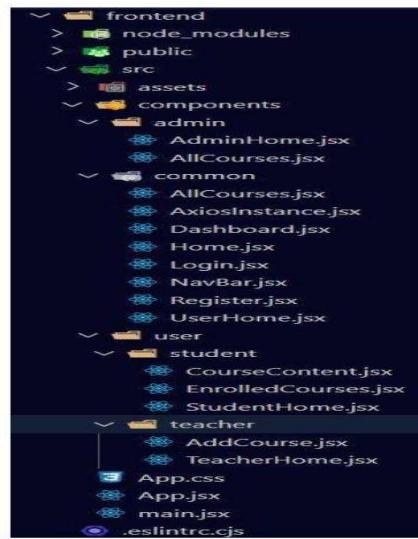

After starting, the application will be accessible at:

```
http://localhost:5172
```

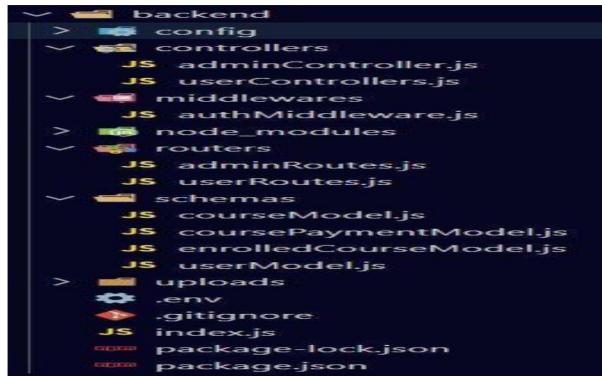

5. Project Structure

The following screenshots represent the folder structure of the LearnHub frontend and backend, along with the root configuration files.

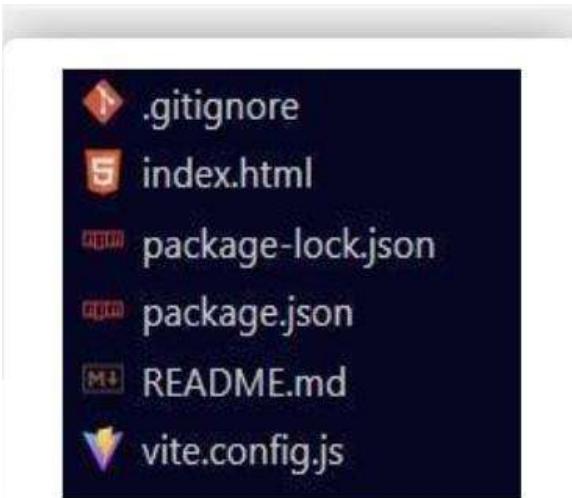

5.1 Frontend Structure (React + Vite)

5.2 Backend Structure (Node.js + Express + MongoDB)

5.3 Root Files (Config & Project Metadata)

6. Conclusion

LearnHub follows a modular full-stack architecture with clear separation between frontend and backend. The structure supports scalability, maintainability, and role-based features for students, teachers, and administrators. This documentation provides the required prerequisites, installation steps, and project structure overview.
